

FOR JOB SEEKERS • GY RESUME SCORE

A robot rejected you — **not a person.**

~75% of resumes are
filtered by an ATS before a
human ever opens them. If
the bot can't read yours,
you're out.

5 things quietly auto-
rejecting your resume 📌

Swipe to fix yours →

WHAT THE BOT CAN'T READ

1 Fancy templates & columns

✗ Two-column / graphic templates — the ATS scrambles them.

✓ One clean column, standard headings, top-to-bottom.

2 No keywords from the JD

✗ Generic resume — the bot never matches you to the role.

✓ Mirror the exact skills & titles from the job post.

💡 The test: paste your resume into plain Notepad. If it turns to mush, so does the bot's read of it.

WHERE IT LOSES YOU

3 Skills buried on page 2

✗ Recruiter spends 7 seconds — never reaches them.

✓ Skills + wins in the top third of page 1.

4 Dates & format it can't parse

✗ Odd date formats / tables → fields come back blank.

✓ Simple MMM YYYY dates, no tables for key info.

💡 Recruiters scan top-to-bottom in ~7 seconds — put your strongest proof where their eyes land first.

THE LAST ONE HURTS

5 A file it can't open

✗ Image-only PDF / uncommon export → the ATS reads nothing.

✓ Text-based PDF or .docx, standard fonts.

7s

is all your resume gets from a human —
after it clears the bot. Make both count.

FIX ALL 5 IN AN AFTERNOON

Then see exactly where you stand.

- 1 Simple one-column format**
- 2 Keywords from the job post**
- 3 Skills in the top third**
- 4 Clean, parseable dates**
- 5 A text-based PDF / .docx**
